

For more resilient, inclusive and sustainable supply chains

## Supply chains in a changing world of work

In today's rapidly changing world, the future of work is being shaped by:

- technological advances,
- climate change,
- demographic shifts,
- geopolitics,
- trade turbulences and
- emerging governance frameworks.

These **drivers** of **change** are transforming **global** production **networks** and **supply chains**. Supply chains contribute to economic growth, job opportunities and poverty reduction. But they can be associated with significant governance gaps and downward pressure on working conditions.

## Sustainable supply chains to build forward better

In 2020, the **International Labour Organization and the European Union** launched a project that uses global supply chains as an entry point for advancing **decent work in five countries and five sectors** of importance to the European market.

- Textiles and clothing manufacturing in Madagascar
- Electronics manufacturing in Viet Nam
- **Coffee production in Colombia**
- Fisheries in Namibia
- Rubber gloves manufacturing in Malaysia

The ILO-European Union's <u>Sustainable Supply Chains to Build Forward Better</u> project supported governments, employers' and workers' organizations and other sectoral actors to advance decent work in five supply chains by equipping them with **new knowledge**, **tools**, **guidance**, **policy advice**, **technical assistance and training**.

The research carried out during the project highlighted decent work challenges and opportunities in the five countries and sectors. Each sector contributes to each country's continued growth and development in different ways, but employers and workers in these sectors experience formidable challenges in terms of advancing decent work.

## Supply Chains for a Sustainable Future of Work

Building on the results and good practices of the just-completed project, the ILO and European Union continue to support governments, employers' and workers' organizations and other sectoral actors to arrive at more resilient, inclusive and sustainable global supply chains.

The new project – <u>Supply Chains for a Sustainable Future of Work</u> – targets three sectors and their supply chain: **coffee in Colombia, rubber gloves in Malaysia and fisheries in Namibia**. The project uses these supply chains as an entry point for further advancing of full and productive employment and decent work as well as respect for fundamental principles and rights at work.

With funding from the European Union, the ILO provides technical assistance and policy advice to constituents and actors in the three supply chains to continue the valuable work towards more resilient, inclusive and sustainable supply chains.
